

Axter Agrosience inc: Results of Farm Testing of Biostimulant Exceed Expectations
Average return on investment of 5.46 obtained during 141 CropBooster® farm trials
at 94 locations in Quebec and Ontario between 2015 and 2017

Mont St-Hilaire, May 22, 2018—The R&D team and management of Axter Agrosience Inc. (“Axter”), a company that specializes in the production and distribution of foliar nutrient solutions and biostimulants for major crops (wheat, soy, corn), are pleased to announce the results of 141 farm trials carried out from 2015 to 2017 at 94 farms located throughout Quebec and Ontario.

These side-by-side trials which were done on acreage representing standard open field growing conditions in Quebec and Ontario allowed researchers to compare yields obtained on treated vs. untreated sections of land.

Parcels of land treated with a solution of herbicide and CropBooster 2.0® or RR SoyBooster 2.0® showed an average yield increase of 560.1 kg/ha in corn, 238.9 kg/ha in soy and 200.1 kg/ha in wheat as compared to yields obtained in sections where only herbicide was used.

These yields allowed producers to obtain a return on investment of 6.7 to 1 for corn, 2.9 to 1 for soy and 6.8 to 1 for wheat. Through these exceptional results, Axter was able to demonstrate the quality of its 2.0 products and technologies.

Results table

Crop	No. of farms	Increase in kg/ha	Yield	\$*
Corn	37	560.1	6.7/1	\$112.00/ha
Wheat	19	200.1	2.9/1	\$50.00/ha
Soy	38	238.9	6.8/1	\$107.00/ha

*Gain in dollars according to metric tonne value of commodities (corn: \$200/MT, soy \$450/MT and wheat \$250/MT)

“The results we are announcing today testify to the thoroughness and vision of Axter Agrosience’s R&D team as challenges in the agricultural sector continue to grow in complexity. CropBooster 2.0® or RR SoyBooster 2.0® not only give a significant quantifiable increase in yield as compared to investment, but the resulting boost in net tonnage is very encouraging for Axter at this point in its history,” says Mr. Pierre Migner, P. Ag., President and CEO of Axter Agrosience Inc.
